Understanding Edexcel GCSE Maths Trigonometry (1380) Syllabus

What is Trigonometry?

Trigonometry is a branch of mathematics dealing with the relationships between the angles and sides of triangles. It is essential for solving problems involving right-angled triangles and has applications in various fields such as physics, engineering, and navigation.

Key Topics Covered

The Edexcel GCSE Maths syllabus for trigonometry (1380) typically includes:

- Basic trigonometric ratios: sine, cosine, and tangent
- Applying trigonometry to find missing sides and angles
- Pythagoras' theorem
- The sine rule and cosine rule
- Solving word problems involving angles and distances
- Graphs of trigonometric functions
- Radian measure and periodicity (advanced topics)

Common Types of Trigonometry Questions in Edexcel GCSE

1. Calculating Side Lengths

Students are often asked to find an unknown side in a right-angled triangle using the sine, cosine, or

tangent ratios.

Example:

In a right-angled triangle, if one angle is 30° and the adjacent side is 10 cm, find the hypotenuse.

2. Finding Angles

Given two sides, students might need to determine an unknown angle using inverse trigonometric functions.

Example:

In a triangle, the opposite side is 7 cm, and the hypotenuse is 10 cm. Find the angle.

3. Applying Pythagoras' Theorem

Questions may involve verifying if a triangle is right-angled or calculating missing sides in non-right-angled triangles.

4. Using the Sine and Cosine Rules

These rules are essential for non-right-angled triangles, particularly when:

- Two sides and an included angle are known (Sine Rule)
- Three sides are known (Cosine Rule)

5. Graphs of Trigonometric Functions

Questions may involve sketching or interpreting sine, cosine, and tangent graphs, understanding their properties, and solving equations graphically.

A bag contains red, blue, and green balls in the ratio 3:2:5. If there are 60 green balls, find the total number of balls in the bag.

Step-by-step Solution:

- Identify the ratio of green balls to the total ratio: Green balls are 5 parts.
- Use the ratio to find the value of one part: Since 5 parts correspond to 60 green balls,

- One part = $60 \div 5 = 12$
- Calculate the total number of parts:

- Red parts = $3 \times 12 = 36$
- Blue parts = $2 \times 12 = 24$
- Green parts = $5 \times 12 = 60$ (given)
- Add all parts to find the total number of balls:

- Total = $36 + 24 + 60 = 120$

Final Answer:

The total number of balls in the bag is 120.

In-Depth Analysis of Sample Questions and Answers

Now, let's analyze some typical questions and detailed solutions that reflect the style of Edexcel GCSE Churchill Maths Paper 3C.

Question 1: Algebraic Problem Solving

Question:

"The expression $(3x^2 - 5x + 2)$ is divided by $(x - 2)$. Find the quotient and the remainder."

Answer Breakdown:

- Method: Polynomial division or synthetic division can be used. Synthetic division is quicker when dividing by a linear factor.

Step-by-step Solution:

- Set up synthetic division with root (2) :

$3 \mid -5 \mid 2 \mid$

$\mid \text{----} \mid \text{----} \mid \text{----} \mid$

$2 \mid 6 \mid 22=4 \mid$

- Bring down the 3:

- Coefficients after division: 3 (quotient term), then multiply and add:

$2 \mid 3 \mid -5 \mid 2 \mid$

$\mid \text{----} \mid \text{----} \mid \text{----} \mid \text{----} \mid$

$\mid \mid 6 \mid 2 \mid \mid$

- Multiply 3 by 2: 6, add to -5: $-5 + 6 = 1$

- Multiply 1 by 2: 2, add to 2: $2 + 2 = 4$

- Conclusion:

- Quotient: $(3x + 1)$

- Remainder: 4

Final Answer:

The division yields a quotient of $(3x + 1)$ and a remainder of 4.

Question 2: Geometry and Reasoning

Question:

"A circle has a radius of 5 cm. A triangle is inscribed in the circle such that one side of the triangle is a diameter. Find the area of the triangle."

Answer Breakdown:

- Key Concept: Thales' theorem states that any triangle inscribed in a circle with a side as a diameter is a right-angled triangle.

Step-by-step solution:

- Identify the right triangle:

The side (AB) (the diameter) is $(2 \times 5 = 10\text{ cm})$.

- Determine the other two sides:

Since the triangle is inscribed with the diameter as one side, the other two vertices (C) are somewhere on the circle, forming a right angle at (C) .

- Area of the triangle:

- The right-angled triangle has legs (AC) and (BC) , both radii of length 5 cm.

- The hypotenuse ($AB = 10\text{ cm}$).

- Calculate the area:

[

$$\text{Area} = \frac{1}{2} \times \text{base} \times \text{height}$$

]

- Using the two radii as perpendicular legs (since the angle at C is 90°):

[

$$\text{Area} = \frac{1}{2} \times 5 \times 5 = \frac{1}{2} \times 25 = 12.5\text{ cm}^2$$

]

Final Answer:

The area of the triangle is 12.5 cm^2 .

Question 3: Data and Probability

Question:

"A box contains 3 red, 4 blue, and 5 green balls. Two balls are drawn at random without replacement. What is the probability that both balls are of different colors?"

Answer Breakdown:

- Total number of balls:

[

$$3 + 4 + 5 = 12$$

]

- Total possible pairs:

\[

$$\binom{12}{2} = \frac{12 \times 11}{2} = 66$$

\]

- Calculate the probability of both balls being the same color and subtract from 1:

- Same color pairs:

- Red: $\binom{3}{2} = 3$

- Blue: $\binom{4}{2} = 6$

- Green: $\binom{5}{2} = 10$

- Total same-color pairs: $3 + 6 + 10 = 19$

- Probability both are the same color:

\[

$$\frac{19}{66}$$

\]

- Probability both are of different colors:

\[

$$1 - \frac{19}{66} = \frac{66 - 19}{66} = \frac{47}{66}$$

\]

Final Answer:

The probability that both balls are of different colors is $\frac{47}{66}$.

Common Pitfalls and How to Avoid Them

- Misreading the question: Always underline or highlight key data and what is being asked.
- Forgetting to consider all cases: Especially in probability and geometric proofs, ensure no scenario is overlooked.
- Incorrect use of formulas: Double-check the formulas used for areas, volumes, or algebraic manipulations.
- Not showing enough working: Partial marks are awarded for method, so write clearly and justify steps.
- Rounding errors: Be aware of the required precision, especially when final answers are in decimal form.
