- The magnetic force on a moving charge is described by the Lorentz force law.
- Magnetic dipoles, such as bar magnets, produce magnetic fields similar to those generated by currents.

Important Laws and Equations

To solve problems related to magnetostatics, students should be familiar with:

- Biot-Savart Law: Describes the magnetic field generated by a steady current element.
- Ampère's Law: Relates the integrated magnetic field around a closed loop to the current passing through the loop.

- Magnetic Field Due to a Long Straight Conductor: $B = \frac{\mu_0 I}{2 \pi r}$
