Methods include integrated pest management (IPM), physical barriers, trapping, and the use of EPA-approved, low-toxicity pesticides, emphasizing minimal chemical exposure and environmental safety. How often should pest control inspections be conducted in pharmaceutical plants? Inspections should be performed at least monthly, with more frequent checks in high-risk areas, and immediately after any pest sighting or sanitation activities. What training should staff receive regarding pest control procedures? Staff should be trained on pest identification, reporting protocols, sanitation practices, proper use of pest control tools, and understanding the importance of maintaining a pest-free environment. How do you document pest control activities to ensure compliance? Maintain detailed logs of inspections, pest sightings, control measures implemented, corrective actions taken, and staff training records, ensuring traceability and regulatory compliance. What role does sanitation play in pest control within pharmaceutical manufacturing? Sanitation minimizes food, water, and waste sources that attract pests, reduces hiding spots, and supports overall pest management efforts, ensuring product safety and quality.
