- Validate the surface using Draft Analysis to confirm proper draft angles for ejection.

Step 3: Creating the Core and Cavity Blocks

- Duplicate the part model into two separate bodies: one for the core and one for the cavity.
- Use the parting surface to split the original model into two halves.
- For the cavity side, retain the external features.
- For the core side, focus on internal features and undercuts.

Step 4: Adding Core and Cavity Features

- Use Pad, Pocket, and Rib tools to add necessary features.
- Incorporate cooling channels, ejector pins, and vents as per design requirements.
- Maintain proper draft angles, fillets, and radii for manufacturability.

Step 5: Assembling and Validating the Mold Components

- Assemble the core and cavity parts in CATIA's Assembly environment.
- Check for interference, gaps, and proper alignment.
- Perform Draft Analysis and Interference Checks to ensure functional fit.
