Sample FLVS Economics DBA Question and Detailed Analysis

Scenario:

A country experiences a significant increase in the price of imported oil, leading to higher transportation costs and inflationary pressures. The government considers implementing a subsidy for domestic oil production.

Question:

Evaluate the potential economic effects of introducing a subsidy for domestic oil producers in this scenario. Include analysis of supply, demand, prices, and possible externalities.

Analytical Breakdown:

- Supply Side Impact: The subsidy lowers production costs, incentivizing domestic producers to increase output, shifting the supply curve outward/rightward.
- Demand Side Impact: If domestic oil becomes cheaper relative to imports, domestic consumption may rise, increasing overall demand.
- Price Effects: Increased supply and demand could lead to a stabilization or reduction in oil prices domestically, cushioning inflation.
- Externalities: Consider positive externalities such as energy security; however, also evaluate potential negative externalities like environmental impacts from increased domestic drilling.
- Broader Economic Effects: Possible improvement in trade balance due to reduced oil imports, but also increased government expenditure on subsidies.

Diagram:

Draw a supply and demand graph showing the initial equilibrium, then illustrate the rightward shift of supply with the subsidy, indicating the new equilibrium price and quantity.

Conclusion:

A subsidy could mitigate inflationary pressures and promote energy independence, but policymakers must weigh environmental externalities and fiscal costs.
