C) Check responsiveness ? Open airway ? Call 911 ? Check breathing ? Start compressions

D) Call 911 ? Open airway ? Check responsiveness ? Check breathing ? Start compressions

Correct Answer:

A) Check responsiveness ? Call 911 ? Open airway ? Check breathing ? Start compressions

Explanation:

This sequence aligns with standard CPR protocols. The first step is to assess responsiveness by gently tapping and shouting. If unresponsive, immediately call emergency services (911). Then, open the airway to check for breathing. If the person is not breathing or only gasping, start chest compressions. Jeff Ellis stresses rapid response to maximize survival chances.

- Throw a rescue tube or buoyant object to the swimmer.

Explanation:

Jeff Ellis advocates for using the safest and most effective rescue methods first. Throwing a rescue device allows the swimmer to grab onto it, minimizing the rescuer's risk and conserving energy. Entering the water headfirst or diving underwater should only be done if the swimmer is in immediate danger and the rescuer is trained and confident in that technique.
