Where to Find the Mercedes Sprinter Paint Code

Locating the paint code on your Mercedes Sprinter involves inspecting specific areas of the vehicle. The code is usually a combination of letters and numbers, often found on a sticker or metal plate.

Primary Locations for the Paint Code

- Driver's Side Door Jamb / Door Frame

- Open the driver's door and examine the sticker or placard on the door frame or pillar.
- The paint code label is often located near the tire information or VIN.

- Engine Bay

- Open the hood and look at the firewall or inner fender.
- Many models feature a sticker with paint codes in this area.

- Vehicle Identification Plate / Sticker

- Typically found on the driver's side door jamb.
- Sometimes on the dashboard, visible through the windshield on the driver's side (look through the windshield at the corner).

- Under the Spare Tire or Trunk Area

- For some models, the code may be located under the trunk lid or spare wheel compartment.

How to Read the Paint Code Label

- The label usually contains multiple codes; identify the one labeled as "Paint Code", "Color Code", or similar.
- The paint code is often a three-character alphanumeric code (e.g., "040", "149").
- Some labels include a description of the color; however, relying solely on the code is best for accuracy.

Understanding Mercedes Sprinter Paint Codes

Once you've located the paint code, it's essential to understand what it means and how to interpret it.

- May include additional control wires for antenna motor or amplifier turn-on.

Step-by-Step Breakdown of the Wiring Diagram

- Power Supply Wiring

- Constant Power (+12V): Usually a red wire, connected directly to the battery through a fuse to provide power to memory and system settings.
- Switched Power (+12V Ignition): Typically a yellow wire, energized when ignition is ON.
- Ground: Black wire, connected securely to chassis ground for proper operation.

- Speaker Wiring

- The system supports multiple speakers with specific wiring configurations:
- Front Left & Right: Gray/Green and Gray/Red.
- Rear Left & Right: Gray/Purple and Gray/Yellow.
- Each speaker has a positive and a negative terminal.
- Proper wiring ensures balanced sound and prevents damage.

- Antenna and External Modules

- The antenna wire (usually blue) activates the antenna booster.
- Additional control lines may connect to GPS, Bluetooth modules, or amplifiers.

- Data and Communication Lines

- The system uses CAN bus or LIN bus lines for communication with other vehicle modules.
- These data lines are critical for functions like steering wheel controls and vehicle diagnostics.
